**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claim 40 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tymes (US 5,029,183) in view of Hoff (US 5,168,271).

Consider claim 40, Tymes teaches a data collection network comprising: a plurality of roaming data collection terminals (fig 1, items 15); a plurality of base stations (Tymes fig 1, items 12,13,14); the plurality of roaming data collection terminals and the plurality of base stations each having wireless transceivers; and each of said roaming data collection terminals selectively deactivates its wireless transceiver (Tymes see especially col 3, lines 1-15). Tymes lacks a teaching of the remote terminal

automatically receiving message indications from the base. Hoff teaches an arrangement for transmitting message indications from a base while saving battery power. Hoff's arrangement includes a plurality of base stations that transmit information packets periodically at each of defined intervals; the plurality of roaming terminals and the plurality of base stations each having wireless transceivers (Hoff see especially fig 2A); and each of said roaming terminals selectively deactivates its wireless transceiver for a consecutive plurality of the defined intervals, and then activates its wireless transceiver to allow receiving the information packets', wherein each of said roaming terminals attempts to synchronize activation of its wireless transceiver to receive information packets transmitted by at least one of the plurality of base stations (Hoff see especially col 25, line 60 col 26, line 65); and wherein the information packets transmitted by the plurality of base stations comprise pending message indications (Hoff see especially col 4, line 58 – col 5, line 25, col 17, lines 15-35, col 22, lines 40-65). It would have been obvious to one of ordinary skill in the art to modify Tymes to use the arrangement of Hoff in order to allow the remotes to automatically receive messages from the base while still saving battery power.

### ***Conclusion***

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Philip J Sobutka whose telephone number is 571-272-7887. The examiner can normally be reached on 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nay Maung can be reached on 571-272-7882.

5. The current fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

On July 15, 2005, the Central FAX Number will change to **571-273-8300**. This new Central FAX Number is the result of relocating the Central FAX server to the Office's Alexandria, Virginia campus.

Most facsimile-transmitted patent application related correspondence is required to be sent to the Central FAX Number. To give customers time to adjust to the new Central FAX Number, faxes sent to the old number (703-872-9306) will be routed to the new number until September 15, 2005. After September 15, 2005, the old number will no longer be in service and **571-273-8300** will be the only facsimile number recognized for "centralized delivery".

**CENTRALIZED DELIVERY POLICY:** For patent related correspondence, hand carry deliveries must be made to the Customer Service Window (now located at the Randolph Building, 401 Dulany Street, Alexandria, VA 22314), and facsimile transmissions must be sent to the Central FAX number, unless an exception applies. For example, if the examiner has rejected claims in a regular U.S. patent application, and the reply to the examiner's Office action is desired to be transmitted by facsimile rather than mailed, the reply must be sent to the Central FAX Number.

6. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
